### Editorial Note

Insights in Biomedicine journal is a multidisciplinary journal publishing scientific papers of high quality in the study of biology, biological processes and application in medicine. Examples of topic areas are molecular medicine, gene therapy, immunobiology, pharmacogenomics, biomedical engineering, cancer biology, drug delivery and discovery, chemical biology, physiology, biomedical technology, pharmacology and basic or clinical researches in various diseases.

Medical microbiology is a natural science which is derived from the development of the germ theory of disease. Germ theory challenged the ancient view that disease was spontaneously generated with the understanding that many diseases are caused by microbes that can reproduce.

Medical microbiology, the large subset of microbiology that is applied to medicine, is a branch of medical science concerned with the prevention, diagnosis and treatment of infectious diseases. This field of science studies various clinical applications of microbes for the improvement of health. There are four kinds of microorganisms that cause infectious disease bacteria, parasites, fungi and viruses, and one type of infectious protein called prion.

All manuscripts sent for publication in our journal are strictly and thoroughly peer-reviewed by experts. The Managing Editor of the journal will perform an initial check of the manuscript's suitability upon receipt. The Editorial Office will then organize the peer-review process performed by independent experts and collect at least two review reports per manuscript. We ask our authors for adequate revisions (with a second round of peer-review if necessary) before a final decision is made. The final decision is made by the editor. Accepted articles are copy-edited and English-edited.

This journal is indexed in the leading databases and, since they are open access, have a broad readership. All published articles of this journal are included in the indexing and abstracting coverage of Index Copernicus, Google Scholar, China National Knowledge Infrastructure (CNKI), Cosmos IF, Publons, Secret Search Engine Labs), Studies receiving funding from a funding organization that is included on the list of PMC and Research Funder Policies or authors having NIH grant were submitted to PubMed.

Advantages of publishing with Insights in Biomedicine journal are speed of publication after qualitative peer review process and high visibility. Open access policy allows maximum visibility of articles published in the journal as they are available to a wide, global audience.

I would also like to thank all the authors, reviewers, the publisher, the advisory and the editorial board of Insights in Biomedicine for their valuable support to bring out the Volume 6 of Insights in Biomedicine in scheduled time.
